Magit Cheatsheet v0.1

Mark Davidson

June 7, 2011

Buffers	History
M-x magit-status Magit's status buffer	1 History
\$ magit-process buffer	L Verbose history
${f g}$ reload status buffer	C-u l History segment
Section Visibility	RET Inspect commita Stage current commit on your branch
TAB Toggle visibility of current section	A Commit current commit on your current branch
S-TAB Toggle visibility of current section and its children	C-w Copy sha1 of current commit into kill ring
1,2,3,4 Expand current section to the corresponding level of detail - 1,2,3 or 4	= Show differences between current and marked commits
M-1,2,3,4 Expand all sections to the corresponding	Make current commit
level of detail - $1,2,3$ or 4	. Unmark current commit if marked
Untracked Files	$\mathbf{C}\text{-}\mathbf{u}$ Unmake marked commit from anywhere
${f s}$ Add untracked file to staging area	Reflogs
 s Add untracked file to staging area i Add file to .gitignore 	Reflogs h Browse reflog from HEAD
i Add file to .gitignore	h Browse reflog from HEADH Browse reflog from chosen point
 i Add file to .gitignore C-u i Prompt for file/directory to add to .gitignore I Add file to .git/info/exclude instead of .gitignore 	h Browse reflog from HEAD
 i Add file to .gitignore C-u i Prompt for file/directory to add to .gitignore I Add file to .git/info/exclude instead of .gitignore Staging and Committing 	h Browse reflog from HEADH Browse reflog from chosen point
 i Add file to .gitignore C-u i Prompt for file/directory to add to .gitignore I Add file to .git/info/exclude instead of .gitignore 	h Browse reflog from HEAD H Browse reflog from chosen point Diffing
 i Add file to .gitignore C-u i Prompt for file/directory to add to .gitignore I Add file to .git/info/exclude instead of .gitignore Staging and Committing 	 h Browse reflog from HEAD H Browse reflog from chosen point Diffing d Show changes between working tree and HEAD
 i Add file to .gitignore C-u i Prompt for file/directory to add to .gitignore I Add file to .git/info/exclude instead of .gitignore Staging and Committing s Stage current hunk 	 h Browse reflog from HEAD H Browse reflog from chosen point Diffing d Show changes between working tree and HEAD D Show changes between two arbitrary revisions
 i Add file to .gitignore C-u i Prompt for file/directory to add to .gitignore I Add file to .git/info/exclude instead of .gitignore Staging and Committing s Stage current hunk u Unstage current hunk 	 h Browse reflog from HEAD H Browse reflog from chosen point Diffing d Show changes between working tree and HEAD D Show changes between two arbitrary revisions a Apply current changes to working tree v Apply current changes to working tree in reverse
 i Add file to .gitignore C-u i Prompt for file/directory to add to .gitignore I Add file to .git/info/exclude instead of .gitignore Staging and Committing s Stage current hunk u Unstage current hunk S Stage all hunks 	 h Browse reflog from HEAD H Browse reflog from chosen point Diffing d Show changes between working tree and HEAD D Show changes between two arbitrary revisions a Apply current changes to working tree
 i Add file to .gitignore C-u i Prompt for file/directory to add to .gitignore I Add file to .git/info/exclude instead of .gitignore Staging and Committing s Stage current hunk u Unstage current hunk S Stage all hunks U Unstage all hunks 	 h Browse reflog from HEAD H Browse reflog from chosen point Diffing d Show changes between working tree and HEAD D Show changes between two arbitrary revisions a Apply current changes to working tree v Apply current changes to working tree in reverse

C-C C-a Make the next commit an amend

 $\textbf{C-c} \ \textbf{C-c} \ \text{Commit}$ annotated tag

Resetting

 \mathbf{x} Reset your current head to chosen revision

X Reset working tree and staging area to most recent commit state

Merging

m Initiate manual merge

M Initiate automatic merge

R Initiate of continue a rebase

Stashing

 ${f z}$ Create new stash

 ${f Z}$ Create new stash and maintain state

RET View stash

a Apply stash

 \mathbf{A} Pop stash

 ${\bf k}$ Drop stash

Rewriting

r s Start a rewrite

 ${f v}$ Revert a given commit

 ${f r}$ ${f t}$ remove bookkeeping information from buffer

 ${f r}$ **a** Abort rewriting

r f Finish rewriting

 ${f r}$ * Toggle the * mark on pending commit

 ${\bf r}$.. Toggle the .. mark on pending commit

Branching

b Switch to different branch

B Create and switch to new branch

Pushing and Pulling

P git push

C-u P git push to specified remote repository

f git remote update

F git pull

Wazzup

W Show summary of how other branches relate to current branch

i Toggle ignore branch

C-U w Show all branches including ignored ones

Interface with Subversion

N r git syn rebase

N c git syn dcommit
